No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The hookworm platelet inhibitor not only blocks CC platelet aggregation, but also prevents adhesion of platelets to CC infibringen and possibly also collagen. In vitro, the inhibitor inhibits CC b-fibringen binding to GPIID/IIIa. The polypeptides and polynucleotides CC are useful for inhibiting platelet function. Thus the polypeptides are useful for veterinary and medical purposes in vascular biology and cancer CC therapy and may also be useful for treating myocardial infarction, CC unstable angina, stroke, cerebral and peripheral anterial angioplasty, CC thrombosis, microvascular and cerebral malaria. They are also useful CC thrombosis, microvascular and cerebral malaria. They are also useful CC treating variety of cancers by altering the neoplastic state of the composition on extracellular matrix substances and invasion of distant CC tissues. The polypeptides are also useful as vaccines for reducing the cCC burden of hookworm infections in population at risk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see AnY23591) is replaced by a Gin Cresidue. NIFs may be useful for treating shock, stroke, acute and Cc chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid crespiratory distress syndrome (AnDs), ischemia reperfusion injury compounds of the faction, and acute inflammatory bowel disease, adult respiratory distress syndrome (AnDs), ischemia-reperfusion injury compounds of the faction, and acute inflammation caused by anterial infection such as sepsis or bacterial meningitis. NIFs or NIF compounds of the as vaccines against parasitic worm infection.

CC bacterial infection as vaccines against parasitic worm infection of anti-NIF antibodies may be useful for detecting infection of a mammalian compounds. Other NIF strom tissue homogenates, cloned cells etc. NIFs may be useful for the detection of NIF minics or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. The present sequence represents a hookworm NIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mutant Neutrophil Inhibitory Factors useful for treating inflammatory conditions and especially to prevent or decrease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 22; Fig 9A-B; 131pp; English.

The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see AnX23591) is replaced by a Gln CC chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid CC arthritis, inflammatory skin diseases, inflammatory bowel disease, adult CC respiratory distress syndrome (ARDS), ischemia-reperfusion injury CC chlowing myocardial infarction, and acute inflammation caused by bacterial infection such as sepsis or bacterial meningitis. NIFS or NIF CF fagments may be used as vaccines against parasitic worm infection of Anti-NIF antibodies may be useful for detecting infection of a mammalian CC compounds. Other NIF from tissue homogenates, caloned cells etc. NIFs may compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. ANY23600-10 represent canine hookworm NIF proteins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                    The specification describes mutant Neutrophil Inhibitory Factors (NIFs), where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANZ3359) is replaced by a Gin CC residue. NIFs may be useful for treating shock, stroke, acute and cc chronic allogatef rejection, vasculitis, autoimmune diabetes, rheumatoid CC arthritis, inflammatory skin diseases, inflammatory bowel disease, adult crespiratory distress syntome (ARDS), ischemia-reperfusion injury CC following myocardial infarction, and acute inflammation caused by NIF CC fragments may be used as vaccines against parasitic worm infaction. CC Anti-NIF antibodies may be useful for detecting infaction of a mammalian CC and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may CC compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as CC anti-NIF and detection of NIF minics or antagonists in other CC compounds. Other NIF agonists and inhibitors may also be used as CC anti-Nie agonists. AAY23600-10 represent canine hookworm NIF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-DEC-1993;

The specification describes mutant Neutrophil Inhibitory Factors (NIFs), where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, or 223 in the wild type sequence (see AAV23591) is replaced by a Gln residue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury following myocardial infarction, and acute inflammation caused by

A canine hookworm cDNA library was screened with a probe amplified using primers 30.2 and 43.3.RC(AAQ52476 and AAQ52477, respectively) which ware based on sequences of isolated NIF peptide fragments. Se of the 120 positive clones were isolated for sequence analysis. One

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bacterial infection such as sepsis or bacterial meningitis. NIFs or fragments may be used as vaccines against parasitic worm infection. Anti-NIF antibodies may be useful for detecting infection of a mamme host by a parasitic worm, as antihelminic agents, and in the detecti and isolation of NIF from tissue homogenates, cloned cells etc. NIFs be useful for the detection of NIF mimics or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23592-98 represent isoform clones of canine hookworm NIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-MAY-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        isolate, designated clone IFL, encoded an 825 nucleotide open reading frame (AAQ52475). The other clones contained partial ORFs and encoded partial NEP polypeptides (see AAR52995-R52990) which are thought to represent six NIF isoforms that are significantly similar to, but not identical to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                                                                                                                                                                                                                           (CORV-) CORVAS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-MAY-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ancylostoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes mutant Neutrophil Inhibitory Factors (NIFs), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, 197, 197, 207 and the wild type sequence (see ANY23591) is replaced by a Gln cresidue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid cc chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid cc carthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia reperfusion injury cc following myocardial infarction, and acute inflammation caused by NIF CC bacterial infection, and section and neutropitis. NIFs or NIF cc fragments may be used as vaccines against parasitic worm infection. CC host by a parasitic worm, as anotherminic agents, and in the detection cnd isolation of NIF from tissue homogenates, cloned cells etc. NIFs may compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as cantihelminic agents. ANY23600-10 represent canine hookworm NIF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The specification describes mutant Neutrophil Inhibitory Factors (NIFs), where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, 107, 23 in the wild type sequence (see ANY23591) is replaced by a Gin residue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vacculitis, autoimmune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury following myocardial infarction, and acute inflammation caused by a Sacterial infection such as sepsis or bacterial meningitis. NIFs or NIF bacterial infection such as sepsis or bacterial meningitis. NIFs or NIF fragments may be used as vaccines against parasitic worm infection.

The Anti-NIF antibodies may be useful for detecting infection of a mammalian and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may be useful for the detection of NIF minics or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23600-10 represent canine hookworm NIF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANY23591) is replaced by a Glin CC chronic allograft rejection, vasculitis, antoimmune diabetes, rheumatoid CC arthritis, inflammatory skin diseases, inflammatory bowel disease, adult CC cospiratory distress syndrome (ARDS), ischemia -reperfusion injury coardial infarction, and acute inflammattor caused by bacterial infection such as sepsis or bacterial meningitis. NIFS or NIF CC bacterial infection such as sepsis or bacterial meningitis or NIF CC fragments may be used as vaccines against parasitic worm infection. CC fragments may be used as vaccines against parasitic worm infection of a mammalian cc host by a parasitic worm, as antihelminic agents, and in the detection cc compounds. Other NIF from tissue homogenates, cloned cells etc. NIFS may compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents and in other cantine compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents also be used as antihelminic agents. AAX23592-98 represent isoform clones of canine

CC inhibitory factor (NIF) comprising growing a cell line expressing NIF CC inhibitory factor (NIF) comprising growing a cell line expressing NIF CC in an animal component free medium selected from inoculum growth medium. CC culture. The method is useful for preparation of NIF. Animal component CC free production growth medium is useful for preparation of NIF. Animal component CC production growth medium is useful for preparation of recombinant CC production. NIF is useful for preventing or treating inflammatory conditions characterised by abnormal neutrophil activation, for treating CC antoimmune diabetes, rheumatoid arthritis, head trauma, inflammatory beach of a securities of the cauchy inflammatory bowel disease, adult respiratory distress CC syndrome (ARDS), ischaemia-reperfusion injury following myocardial infarction, in which neutrophil infiltration and activation has been complicated and acute inflammation caused by bacterial infection, such as sepsis or bacterial meningitis. NIF is also useful as diagnostic agents, CC antagonists for their ability to affect NIF minics or to detect NIF creepfur, as a vaccine against parasitic worm infections. The present sequence is Ancylostoma canium mature NIF1 protein.

The specification describes mutant Neutrophil Inhibitory Factors (NIFs), 20 where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, 20 or 223 in the wild type sequence (see AAV23591) is replaced by a Gin cesidue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury following myocardial infarction, and acute inflammation caused by bacterial infection such as sepsis or bacterial meningitis. NIFs or NIF fragments may be used as vaccines against parasitic worm infection. Anti-NIF antibodies may be useful for detecting infection of a mammalian thost by a parasitic worm, as antihelminic agents, and in the detection can disolation of NIF from tissue homogenates, cloned cells etc. NIFs may be useful for the detection of NIF mimics or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mutant Neutrophil Inhibitory Factors useful for treating inflammatory conditions and especially to prevent or decrease inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Neutrophil inhibitory factor; NIF; mutant; shock; stroke; allograft rejection; vasculitis; autoimmune diabetes; ARDS; rheumatoid arthritis; inflammatory skin disease; myocardial infarction inflammatory bowel disease; adult respiratory distress syndrome; ischemia-reperfusion injury; acute inflammation; bacterial infection; vaccine; parasitic worm infection; antihelminic.

                                                                                                                                                                A canine hookworm cDNA library was screened with a probe amplified using primers 30.2 and 43.3 (AAQ52476 and AAQ52477, respectively) which were based on sequences of isolated NIF peptide fragments. Seven of the 120 positive clones were isolated for sequence analysis. One isolated designated clone IFL, encoded an 825 nucleotide open reading frame (AAQ52475). The other clones contained partial ORFs and encoded partial NIF polypeptides (see AAR5285-R52990) which are thought to represent six NIF isoforms that are significantly similar to, but not identical to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                                                                                                                                                                                                                                                                                                                                                                                          New neutrophil inhibitory factor from parasitic worms - for preventing and treating inflammation, also derived nucleic vectors, transformed hosts and antibodies

CC The specification describes mutant Neutrophil Inhibitory Factors (NIFs), cc where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, cc or 223 in the wild type sequence (see ANY23551) is replaced by a Gln cc residue. NIFs may be useful for treating shock, stroke, acute and cc chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid cc arthritis, inflammatory skin diseases, inflammatory bowel disease, adult crespiratory distress syndrome (ANDS), ischemia-reperfusion injury cc following myocardial infarction, and acute inflammation caused by anterial infection such as sepsis or bacterial meningitis. NIFs or NIF cc fragments may be used as vaccines against parasitic worm infection. Cc hati-NIF antibodies may be useful for detecting infection of a mammalian cc host by a parasitic worm, as antihalminic agents, and in the detection and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may cc compounds. Other NIF agonists and inhibitors may also be used as cc antihalminic agents. ANY23600-10 represent canine hookworm NIF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANY23591) is replaced by a Gln Cresidue. NIFS may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitie, autoimmune diabetes, rheumatoid CC arthritis, inflammatory skin diseases, inflammatory bowel disease, adult Crespiratory distress syndrome (ANDS), ischemia-reperfusion injury CC following myocardial inferction, and acute inflammation caused by bacterial infection such as sepsis or bacterial meningitis. NIFS or NIF CF following myocardial inferction, and acute inflammation caused by CC following myocardial inferction, and acute inflammation of a mammalian or inferction of a mammalian or inferction of a mammalian or compounds. Other worm, as antihelminic agents, and in the detection and isolation of NIF from tissue homogenates, cloned cells etc. NIFS may CC compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23592-98 represent isoform clones of canine or hockworm NIF.
                                                                     Neutrophil inhibitory factor: NIF; mutant; shock; stroke; allograft rejection; vasculitis; autoimmune diabetes; ARDS; rheumatoid arthritis; inflammatory skin disease; myocardial infarction; inflammatory bowel disease; adult respiratory distress syndrome; ischemia-reperfusion injury; acute inflammation; bacterial infection; vaccine; parasitic worm infection; antihelminic.
Ancylostoma caninum.
                                                                                                                                                                                                                                                                                                                                                            Neutrophil inhibitory factor clone 1FL.

The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANZ2591) its replaced by a Gln cc residue. NIFS may be useful for treating shock, stroke, acute and cc chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid CC arthritis, inflammatory skin diseases, inflammatory bowel disease, adult crespiratory distress syndrome (ARDS), ischemia-reperfusion injury CC following myocardial infarction, and acute inflammation caused by a CC following myocardial infarction, and acute inflammation caused by a CC fragments may be used as vaccines against parasitic worm infection. CC fragments may be used as vaccines against parasitic worm infection of a mammalian const by a parasitic worm, as antihabminic agents, and in the detection cand isolation of NIF from tissue homogenates, cloned cells etc. NIFs may compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as cantine hookworm compounds. Other NIF agonists and inhibitors may also be used as cantine hookworm.

                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new method for treating copathophysiological conditions involving neutrophils. The method of the convention involves administering to a subject simultaneously/separately/ sequentially Neutrophil inhibitory Factor (NIF) and another conventially Neutrophil inhibitory Factor (NIF) and another convention is salt, where the agents are present in amounts that render the combination of the 2 or more agents effective in treating the combination of the 2 or more agents effective in treating the combination of the 2 or more agents effective in treating the convention of the 2 or more agents effective in treating the convention of the 2 or more agents effective in treating the conventions involving neutrophils. The combination of the 1 state one neutrophil inhibitory Factor (NIF) and at least one other convented to a medicament of the treatment of the treatment of the treatment of the useful in the manufacture of a medicament for the treatment of the treatment of conthophysiological conditions involving neutrophils. In particular, the candor reperfusion injury, post-ischaemic demage conditions involving neutrophils is ischaemic damage cand/or reperfusion injury, post-ischaemic cerebral inflammation conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed to the present amino acid sequence represents the canine (dog) hookworm conversed the present amino acid sequence represents the canine th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for the preparation of neutrophil CC inhibitory factor (NIF) comprising growing a cell line expressing NIF CC in an animal component-free medium salected from inoculum growth medium. CC endture. The method is useful for preparation of NIF. Animal component-CC free production growth medium is useful for preparation of recombinant CC production growth medium is useful for preparation of recombinant CC production growth medium is useful for preparation. Of recombinant CC productions characterised by abnormal neutrophil activation, for treating CC shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid arthritis, head trauma, inflammatory CC skin diseases, inflammatory bowel disease, adult respiratory distress cynfrome (ARDS), ischaemia-reperfusion injury following myocardial infarction, in which neutrophil infiltration and activation has been complicated and acute inflammation caused by bacterial infection, such as espsis or bacterial meningitis. NIF is also useful as diagnostic agents. CC sepsis or bacterial meningitis. NIF is also useful as diagnostic agents. CC antagonists for their ability to affect NIF minics or to detect NIF creeptor, as a vaccine against parasitic worm infections in mammals, and CC is Ancylostoma canium NIF1 protein encoded by pEE14/NIF1cr insert DNA.

The specification describes mutant Neutrophil Inhibitory Factors (NIFs), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANZ3351) is replaced by a Gln CC residue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid cc arthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury bacterial infection such as sepsis or bacterial meningitis. NIFs or NIF CC following myocardial infarction, and acute inflammation caused by acterial infection such as sepsis or bacterial meningitis. NIFs or NIF CC fragments may be used as vaccines against parasitic worm infection and instrumental parasitic worm, as antihelminic agents, and in the detection cand isolation of NIF from tissue homogenates, cloned cells etc. NIFs may be useful for the detection of NIF mimics or antagonists in other CC compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. The present sequence is encoded by a two-cistron CC Met-NIF expression cassette of Pma5-NII/3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-DEC-1993;

NIFS or NIF CC fragments may be used as vaccines against parasitic worm infection. CC fragments may be useful for detecting infection of a mammalian can be useful for the detection of NIF minics or antagonists in other CC compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds.

                                                                                                                                                                  A canine hookworm cDNA library was screened with a probe amplified using primers 30.2 and 43.3.RC(AAQ52476 and AAQ52477, respectively) which were based on sequences of isolated NIF peptide fragments. Seven of the 120 positive clones were isolated for sequence analysis. One isolate, designated clone IFL, encoded and 85 nucleotide open reading frame (AAQ52475). The other clones contained partial ORFs and encoded partial NIF polypeptides (see AAR52985-R52990) which are thought to represent six NIF isoforms that are significantly similar to, but not identical to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                                                                                                                                                                                                                                                                                   New neutrophil inhibitory factor from parasitic worms - for preventing and treating inflammation, also derived nucleic vectors, transformed hosts and antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11-MAY-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                 The specification describes mutant Neutrophil Inhibitory Factors (NIF8), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see AAY23591) is replaced by a Gin C residue. NIFs may be useful for treating shock, stroke, acute and C chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bowel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury CC following myocardial infarction, and acute inflammation caused by acterial infection such as sepsis or bacterial meningitis. NIFs or NIF CC fragments may be used as vaccines sgainst parasitic worm infection. CC host by a parasitic worm, as antihelminic agents, and in the detection host by a parasitic worm, as antihelminic agents, and in the detection of NIF from tissue homogenates, cloned cells etc. NIFs may CC compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as compounds. Other NIF agonists and inhibitors may also be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24-DEC-1992;

The specification describes mutant Neutrophil Inhibitory Factors (NIFs), where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, or 223 in the wild type sequence (see AAY23591) is replaced by a Gin residue. NIFs may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bowel disease, adult
                                                                                                                                               Mutant Neutrophil Inhibitory Factors useful for treating inflammatory conditions and especially to prevent or decrease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Neutrophil inhibitory factor, NIF; mutant; shock; stroke; allograft rejection; vasculitis; autoimmune diabetes; ARDS; rheumatoid arthritis; inflammatory skin disease; myocardial infarction; inflammatory bowel disease; adult respiratory distress syndrome; ischemia reperfusion injury; acute inflammation; bacterial infection; vaccine; parasitic worm infection; antihelminic.

NIFs or NIF fragments may be used as vaccines against parasitic worm infection. Anti-NIF antibodies may be useful for detecting infection of a mammalian host by a parasitic worm, as antihelminic agents, and in the detection and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may be useful for the detection of NIF mimits or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23600-10 represent canine hookworm NIF proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ancylostoma caninum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-JUN-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAR52988;

The other clones contained partial ORFs and encoded partial NIF polypeptides (see AAR52885-B52990) which are thought to represent six NIF isoforms that are significantly similar to, but not identical to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                             Mutant Neutrophil Inhibitory Factors useful for treating inflammatory conditions and especially to prevent or decrease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The specification describes mutant Neutrophil Inhibitory Factors (NIFS), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, CC or 223 in the wild type sequence (see ANY23591) is replaced by a Gin C chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid CC arthrilis, inflammatory skin diseases, inflammatory bowel disease, adult C respiratory distress syndrome (ARDS), ischemia-reperfusion injury CC following myocardial inferction, and acute inflammation caused by CC fragments may be used as vaccines against parasitic worm infection in CC fait NIF antibodies may be useful for detecting infection of a mammalian CC host by a parasitic worm, as antihelminic agents, and in the detection and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may be useful for detecting agents, and in the detection of the useful for the detection of NIF minics or antagonists in other C compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23592-98 represent isoform clones of canine CC hockworm NIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

The amino acid sequence of the ASP-1 pro-form (AAW04321) was detd. from a cDNA clone (AAW38465) obtd. from an Ancylostoma caninum is larvae cDNA library. ASP-1 represents a family of proteins (see also AAW0432-23) that are highly immunogenic in experimental animals. Recombinant ASP proteins can be produced in a variety of hosts. They can be used in vaccines for hookworm, in the diagnosis of hookworm infection, or to raise antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1996-477130/47.

Ancylostoma secreted protein ASP-2 type I (AAW04322) is secreted by canine hookworm larvae as they begin feeding. Its amino acid sequence was deduced from a cDNA clone (AAT38467) isolated from an Ancylostoma caninum L3 larvae cDNA library. Type I ASP-2 differs from type II ASP-2 (AAW04323) only at amino acid positions 92 and 95. The proteins are members of a family of proteins (see also AAW04321) that are highly immunogenic in experimental animals. Recombinant ASP proteins can be produced in a variety of hosts. They can be used in vaccines for hookworm, in the diagnosis of hookworm infection, or to raise antibodies.
Ancylostoma secreted protein ASP-2 type II (AAW04323) is canine hookworm larvae as they begin feeding. Its amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ancylostoma secreted protein ASP-2 type II.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence was deduced from a cDNA clone (AAT38468) isolated from an Ancylostoma caninum L3 larvae cDNA library. Type II ASP-2 differs from type I ASP-2 (AAW04322) only at amino acid positions 92 and 95. The proteins are members of a family of proteins (see also AAW04321) that are highly immunogenic in experimental animals. Recombinant ASP proteins can be produced in a variety of hosts. They can be used in vaccines for hookworm, in the diagnosis of hookworm infection, or to raise antibodies.
                              Inducing angiogenesis in a tissue using from the nematode Onchocera volvulus is vascular disease such as ischemia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Db.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for inducing anglogenesis in a CC tissue. The method comprising contacting the itssue with Ov-ASP. The Ov-ASP molecules are used to treat circulatory or vascular disorders, as molecules are used to treat circulatory or vascular disorders, consential disease, more particularly cerebrovascular ischaemia, veno-coclusive disease, more particularly cerebrovascular ischaemia, veno-coclusive disease or myocardial ischaemia, especially coronary artery coclusive disease or myocardial ischaemia, especially coronary artery coclusive disease or myocardial ischaemia, especially coronary artery coclusive disease. The invention is also used to treat cancer, diabetic retinopathy and inflammatory disease. Anglogenesis is also central to a number of pathological processes, including abnormalities of wound companing the disease such as disease. Anglogenesis is also central to the aling in diseases such as a rheumatorid arthritis, psoriasis and companing the disease such as rheumatorid arthritis, psoriasis and periodontitis; dermatological conditions such as cutaneous malignanty, constituted to treat concocerclasis (River Bindness) or bening or malignant conspirations. The present sequence is Ancylostoma caninum (Ac)-Asp protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A canine hookworm cDNA library was screened with a probe amplified using primers 30.2 and 43.3.R(QAQ52476 and AAQ52477, respectively) which were based on sequences of isolated NIF peptide fragments. Seven of the 120 positive clones were isolated for sequence analysis. One isolate, designated clone IFL, encoded an 825 nucleotide open reading frame (AAQ52475). The other clones contained partial ORFs and encoded partial NIF polypeptides (see AAR32985-R52990) which are thought to represent six NIF isoforms that are significantly similar to, but not identical to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                                                                                                                                                      Foster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ancylostoma caninum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       vaccine;

The specification describes mutant Neutrophil Inhibitory Factors (NIFS), C where at least 1 of the Asp residues at positions 18, 87, 110, 130, 197, 20 or 223 in the wild type sequence (see AAY23591) is replaced by a Gin residue. NIFS may be useful for treating shock, stroke, acute and chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid arthritis, inflammatory skin diseases, inflammatory bouel disease, adult respiratory distress syndrome (ARDS), ischemia-reperfusion injury following myocardial infarction, and acute inflammation caused by acterial infection such as sepsis or bacterial meningitis. NIFS or NIF fragments may be used as vaccines against parasitic worm infection. Anti-NIF antibodies may be useful for detecting infection of a mammalian host by a parasitic worm, as antihelminic agents, and in the detection and isolation of NIF from tissue homogenetes, cloned cells etc. NIFS may be useful for the detection of NIF minics or antagonists in other compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY23592-98 represent isoform clones of canine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

trichostrongylid protein ES24 of the gastro-intestinal nematode

Rememonius contortus. Its amino acid sequence was deduced from a

cDNA clone (see AAV03016) isolated from an L5 larval cDNA library.

Also claimed is the a recombinant ES24 polynucleotide comprised in

a vector, and a vaccine for combatting H. contortus infections in

sheep or goats that comprises the recombinant polynucleotide or the

ES24 protein. Vaccines are also provided that contain or express

the ES15 protein (see AAW37165) of H. contortus or the ES14.0 (see

ES24 protein (see AAW37165) antigen of Cooperia oncophora.

Trichostrongylids are a major constraint in ruminant production

world-wide, e.g. producing diarrhoea or anaemia leading to reduced

milk, meat and wool production. To enhance immunogenicity, the ES

coupled with other compounds, e.g. adjuvants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PCR primers Al12/301 and Al12/302 were designed to be used to campilify the DNA encoding the 45 kD protein. In the reaction containing primer Al12/301 a unique band of approximately 650 bp was containing primer Al12/301 a unique band of approximately 650 bp band was not seen when primer Al12/302 was used. The PCR cloned was grown and purified for use as call 2/302 was used. The PCR cloned was grown and purified for use as a hybridisation probe to screen the pBTA879 cDNA library. pBTA879 cC is the sequence of one of these clones. There is no methionine contain codon present in this region of the sequence so this clone probably does not represent the complete coding region. pBTA879 cC identical to, the native glycoprotein which is related to, but not contain to isolate a cDNA clone coding for the full length native 15 classical to, the native glycoprotein isolated from H. contorcus. The order to isolate a cDNA clone coding for the full length native 15 clones, pBTA879. AAQ28094 is the sequence of one of these clones, pBTA879. AAQ28094 is the sequence of one of these clones, pBTA879. AAQ28094 is the sequence of the contain an contain many contain an experience were screened with the fragment contains and contain many contains and contain many contains and contain and contain many contains and contain many contains and contain many contains and contain

containing primers Al12/301 and Al12/302 were designed to be used to containing primer Al12/301 and unique band of approximately 550 bp containing primer Al12/301 a unique band of approximately 550 bp band was not seen when primer observed. The approximately 550 bp band was not seen when primer cobserved. The approximately 550 bp band was not seen when primer a hybridisation probe to screen the pBTA879 cDNA library. pBTA879 is the sequence of one of these clones. There is no methionine is the sequence of one of these clones. There is no methionine in that one codon present in this region of the sequence so this clone in tration codon present in this region of the sequence this clone is probably does not represent the complete coding region. pBTA879 comprobed by the patitive glycoprotein which is related to, but not probably encodes a glycoprotein which is related to, but not is clantical to, the native glycoprotein isolated from H. contortus. In order to isolate a cDNA clone coding for the full length native isolated from pBTA879. AAQ28094 is the sequence of one of these clones, pBTA 963. Once again, this clone does not contain an interior methionine.
                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-JUN-1994 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A canine hookworm cDNA library was screened with a probe amplified using primers 30.2 and 43.3.RC(AAQ52476 and AAQ52477, respectively) which were based on sequences of isolated NIF peptide fragments. Seven which were based on sequences of isolated for sequence analysis. One of the 120 positive clones were isolated for sequence analysis. One isolate, designated clone IFL, encoded an 825 nucleotide open reading frame (AAQ52475). The other clones contained partial ORFs and encoded partial NIF polypeptides (see AAR52985-R52990) which are thought to represent six NIF isoforms that are significantly similar to, but represent to, the prototypical NIF-IFL polypeptide (AAR42488).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO9323063-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ancylostoma caninum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-MAY-1992;

An the specification describes mutant Neutrophil Inhibitory Factors (NIFs), CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 137, CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 137, CC where at least 1 of the Asp residues at positions 18, 87, 110, 130, 137, CC or 223 in the wild type sequence (see AAY23591) is replaced by a Gin CC crimonic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid CC chronic allograft rejection, vasculitis, autoimmune diabetes, rheumatoid CC captiratory distress syndrome (ARDS), ischemia-reperfusion injury CC respiratory distress syndrome (ARDS), ischemia-reperfusion injury CC complicatory distress syndrome (ARDS), ischemia-reperfusion injury CC following myocardial infarction, and acute inflammation caused by CC compounts may be used as vaccines against parasitic worm infection.

CC fragments may be used as vaccines against parasitic worm infection of a mammalian CC anti-NIF antibodies may be useful for detecting infection of a mammalian CC anti-NIF antibodies may be useful for detecting infection of a mammalian CC and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may CC and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may CC and isolation of NIF from tissue homogenates, cloned cells etc. NIFs may CC and isolation agents. AAY33592-98 represent isoform clones of canine CC compounds. Other NIF agonists and inhibitors may also be used as antihelminic agents. AAY33592-98 represent isoform clones of canine
                                                                                                                                                                                                                                                                                                                                      Query Match

The present invention relates to a method for inducing angiogenesis in a ctissue. The method comprising contacting the tissue with Oy-ASP. The Oy-CC tissue. The method comprising contacting the tissue with Oy-ASP. The Oy-CC particularly ischaemia, congenital heart disease, myocardial disease or coclusive disease; more particularly cerebrovascular ischaemia, venocardial invention is also used to treat cancer, disbettle contacts and inflammatory disease. Angiogenesis is also central to a cretinopathy and inflammatory disease. Angiogenesis is also central to a comment of pathological processes, including abnormalities of wound comment of pathological processes, including abnormalities of wound contained in diseases such as diabettes and duodenal ulceration; chronic confinammatory disorders such as rheumatoid arthritis, psoriasis and contact in treat confocerciasis (River Blindness) or benign or malignant consequence is onchocerca volvulus (Oy)-Asp-2 contacts.

The present invention relates to a method for inducing angiogenesis in tissue. The method comprising contacting the tissue with Ov-ASP. The Ov ASP molecules are used to treat circulatory or vascular disorders, particularly ischaemia, congenital heart disease, myocardial disease or pericardial disease, more particularly cerebrovascular ischaemia, veno-

The invention is also used to treat cancer, diabetic retinopathy and inflammatory disease. Anglogenesis is also central to a number of pathological processes, including abnormalities of wound inflammatory disorders such as diabetes and duodenal ulceration; chronic inflammatory disorders such as rheumatoid arthritis, poriasis and periodontities, dermatological conditions such as cutaneous malignancy, periodontitis; dermatological conditions such as cutaneous malignancy, the sarcoma, pyogenic granulomas and warts. Anti-Ov-ASP factors are useful to treat onchocerciasis (Atver Blindness) or benign or malignant protein. The present sequence is Onchocerca volvulus (Ov)-Asp-3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

The method comprising contacting the tissue with Ov-ASP, The Ov-ASP molecules are used to treat circulatory or vascular disorders, as molecules are used to treat circulatory or vascular disorders, particularly ischaemia, congenital heart disease, myocardial disease or pericardial disease, more particularly cerebrovascular ischaemia, venocaclusive disease or myocardial ischaemia, especially coronary artery disease. The invention is also used to treat cancer, diabetic retinopathy and inflammatory disease. Angiogenesis is also central to a number of pathological processes, including abnormalities of wound healing in diseases such as diabetes and duodenal ulceration; chronic inflammatory disorders such as rheumatoid arthritis, paoriasis and periodontitis; dermatological conditions such as cutaneous malignant, sepolasi to treat concoerciasis (River Bindness) or benign or malignant complasia. The present sequence is Onchocerca volvulus (Ov)-Asp-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                      The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the CC nucled acids encoding them. These sequences are useful for the treatment CC or prevention of numerous disorders including myelogenous leukaemia, C carcinomas, melanomas, gliomas, astrocytomas, congenital neonatal alloimnune thrombocytopaenia, neurological disorders, neurodegenerative CC clarcot-Marie-Tooth neuropathy, demyelodysplastic syndrome, familial myelodysplastic syndrome, familial cc myelodysplastic syndrome, mental health conditions, immunological conventysplastic syndrome, mental health conditions, immunological consinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases, reproductive disorders, infertility, male cosinophilia, lung diseases, reproductive disorders, inspatitis C, gastric consolid disease, turcot syndrome, liver cirrhosis, hepatitis C, gastric cdisorders, pancreatic diseases such as diabetes, schistosoma mansoni confection Spinocerabellar ataxia, Plasmodium faiciparum parasitaemia, corneal dystrophy Greonouw type I, Corneal dystrophy-lattice type I and corneal dystrophy Greonouw type I, Corneal dystrophy corneal dystrophy. This sequence represents FCTR7, a trypsin inhibitor-like protein.
                                                                                                                                                                                    Query Match

                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cencer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c N & Misorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 200
